JSF & Model

Change Notification

State Query

View

- Renders the models
- Requests updates from models
- Sends user actions to controller
- Allow controller to select View

Navigation Handler

View Selection

User Actions

Model

- Encapsulates application state
- Responds to state queries
- Exposes application functionality
- Notifies Views of changes

Object

State Change

Controller

- Defines application behavior
- Maps user actions to model updates
- Selects views for response
- One for each functionality

JSR-314

JavaServer Faces

Newsworthy in 2.0

</ui:composition>
```

Is it enough?

Composite Components

CC ~ interface

```
<composite:interface>  
    <composite:attribute name="auctions"  
                        type="java.util.List"  
                        required="true" />  
</composite:interface>
```

CC ~ implementation

```
<composite:implementation>
```

```
  <rich:dataTable id="auctionsTable" value="#{cc.attrs.auctions}" var="auct" rows="10">
```

```
    <f:facet name="header">
```

```
      <rich:dataScroller forComponent="auctionsTable" />
```

```
    </f:facet>
```

```
    <rich:column sortBy="#{auct.name}" sortOrder="ascending" >
```

```
      <h:link outcome="detail" includeViewParams="true">#{auct.name}</h:link>
```

```
    </rich:column>
```

```
    <h:column>
```

```
      <f:facet name="header">Owner</f:facet>
```

```
      #{auct.owner.name}
```

```
    </h:column>
```

```
    <h:column>
```

```
      <f:facet name="header">Original Price</f:facet>
```

```
      #{auct.originalPrice}
```

```
    </h:column>
```

```
    ...
```

```
  </rich:dataTable>
```

```
</composite:implementation>
```

CC ~ usage

```
<ui:composition template="templates/home.xhtml">

  <ui:param name="activeTab" value="myAuctions" />
  <ui:param name="requiredLogin" value="true" />

  <ui:define name="content">

    <h2>My Auctions</h2>

    ◆ <a:auctionList auctions="#{currentUser.auctions}" />

    <h2>My Favorites</h2>

    ◆ <a:auctionList auctions="#{currentUser.favorites}" />

  </ui:define>

</ui:composition>
```

Client Behaviors

Client Behaviors

- Declarative Validation
- Request Queues
- DOM and Style Manipulation
- Visual Effects and Animations
- Tooltips and Hover Content
- Drag-n'-Drop
- Keyboard Shortcuts
- Deferred Data Fetching

Project Stages

(development, testing, production)

```
<context-param>  
  <param-name>javax.faces.PROJECT_STAGE</param-name>  
  <param-value>Development</param-value>  
</context-param>
```

Resource Loading

Resource Loading

- `{war}/resources`
- `{jar}/META-INF/resources`

Resource Loading

[**locale/**][**library/**][**version/**]**resource**[/**version**]

```
resources/images/image1.png

System Events

Event object	Context	Description
SystemEvent	all	All events
ComponentSystemEvent	component	All component events
PostAddToViewEvent	component	After a component was added to the view
PostConstructViewMapEvent	component	After a view map was created
PostRestoreStateEvent	component	After a component has its state restored
PostValidateEvent	component	After a component has been validated
PreDestroyViewMapEvent	component	Before a view map has been restored
PreRemoveFromViewEvent	component	Before a component has been removed from the view
PreRenderComponentEvent	component	After a component has been rendered
PreRenderViewEvent	component	Before a view has been rendered
PreValidateEvent	component	Before a component has been validated
ExceptionQueuedEvent	system	When an exception has been queued
PostConstructApplicationEvent	system	After the application has been constructed
PostConstructCustomScopeEvent	system	After a custom scope has been constructed
PreDestroyApplicationEvent	system	Before the application is destroyed
PreDestroyCustomScopeEvent	system	Before a custom scope is destroyed

Exception Handling

- **ExceptionHandler** deals all exceptions
 - Not caught in JSF life-cycle
 - Published by system event `ExceptionQueuedEvent`

Built-In Ajax

f:ajax

```
<h:panelGrid columns="3">
  <h:outputLabel value="Auction Name:" />
  <h:inputText id="auctionName" value="#{newAuctionWizard.auction.name}">
    ◆ <f:ajax event="keyup" render="auctionNameMessages" />
  </h:inputText>
  <rich:message id="auctionNameMessages" for="auctionName" />
  ...
</rich:panelGrid>
```
